

Lecture – 8

Course Title: Fundamental Website Development

Course Code: CIS-121

Course Teacher: Md. Anowar Kabir

Topics: Introduction to CSS

CSS

Cascading Style Sheets, fondly referred to as **CSS**, is a simply designed language intended to simplify the process of making web pages presentable. CSS allows you to apply styles to web pages. More importantly, CSS enables you to do this independent of the HTML that makes up each web page.

CSS is easy to learn and understood, but it provides powerful control over the presentation of an HTML document.

- CSS stands for Cascading Style Sheets
- CSS describes how HTML elements are to be displayed on screen, paper, or in other media
- CSS saves a lot of work. It can control the layout of multiple web pages all at once
- External style sheets are stored in CSS files

WHY CSS?

- ❖ **CSS saves time:** You can write CSS once and reuse the same sheet in multiple HTML pages.
- ❖ **Easy Maintenance:** To make a global change simply change the style, and all elements in all the webpages will be updated automatically.
- ❖ **Search Engines:** CSS is considered a clean coding technique, which means search engines won't have to struggle to "read" its content.
- ❖ **Superior styles to HTML:** CSS has a much wider array of attributes than HTML, so you can give a far better look to your HTML page in comparison to HTML attributes.
- ❖ **Offline Browsing:** CSS can store web applications locally with the help of an offline cache. Using this we can view offline websites.

Methods for Adding CSS:

THREE METHODS FOR ADDING CSS

- **INLINE CSS:** DIRECTLY IN THE HTML ELEMENT (NOT RECOMEMDED)
- **INTERNAL CSS:** USING `<STYLE>` TAGS WITHIN A SINGLE DOCUMENT.
- **EXTERNAL CSS:** LINKING AN EXTERNAL `.CSS` FILE

1. Inline CSS

```
• <!DOCTYPE html>
• <html lang="en">
• <head>
•   <meta charset="UTF-8">
•   <meta http-equiv="X-UA-Compatible" content="IE=edge">
•   <meta name="viewport" content="width=device-width, initial-scale=1.0">
•   <title>1st Class of CSS</title>
• </head>
• <body>
•   <h1 style="color: red;">This is our first class of CSS. Hello CSS</h1>
•
•   <p style="color: green;"> Lorem ipsum dolor sit amet consectetur adipis
      icing elit. Maxime reprehenderit provident possimus? Dolorum temporibus te
      mpore laborum eos consequatur magni quasi cumque, iste molestias quod expl
      icabo labore veritatis minus deleniti ipsum.</p>
•
• </body>
• </html>
•
• <!--inline>
```

1. Internal CSS

```
• <!DOCTYPE html>
• <html lang="en">
• <head>
•   <meta charset="UTF-8">
```

```

• <meta http-equiv="X-UA-Compatible" content="IE=edge">
• <meta name="viewport" content="width=device-width, initial-scale=1.0">
• <title>1st Class of CSS</title>
• <style>
•   h1{
•     color:blueviolet;
•     font-size: 20px;
•   }
• </style>
• </head>
• <body>
• <h1>
•   This is our 1st class
• </h1>
• </body>
• </html>
•
• <!--internal>

```

1. External CSS

```

• <!DOCTYPE html>
• <html lang="en">
• <head>
•   <meta charset="UTF-8">
•   <meta http-equiv="X-UA-Compatible" content="IE=edge">
•   <meta name="viewport" content="width=device-width, initial-scale=1.0">
•   <title>1st Class of CSS</title>
•   <link rel="stylesheet" href="style.css">
• </head>
• <body>
• <h1>
•   This is our 1st class
• </h1>
•
• <h2>Welcome to our 1st class</h2>
• <p>Lorem ipsum dolor sit amet consectetur adipisicing elit. At eaque, dist
  inctio itaque eius similique quam quidem amet voluptatum molestias fugiat
  illum velit, vel fuga? Accusamus sunt reiciendis expedita! Similique, ut.<
  /p>
• </body>
• </html>
•
• <!--External CSS>

```

Css code:

```
h1{
  color:blue;
  font-size: 30px;
}

h2{
  color:red;
  font-size: 100px;
}

p{
  color: brown;
  font-size: 20px;
}
```

HW: Practice External CSS using minimum 5 elements
